Hackathon Prompt: Level Up Your Study Group!

Challenge: Design and build a mobile app or web platform that enhances the collaboration and communication within a college study group.

Focus on these aspects:

- **Improved Communication:** Features like real-time chat, shared note-taking, and document collaboration to streamline communication and study sessions.
- **Task Management:** Integrate tools to assign tasks, set deadlines, and track individual progress within the group.
- **Gamification (Optional):** Incorporate fun elements like points, badges, or leaderboards to boost engagement and motivation within the study group.

Beginner Friendly Considerations:

- **Prioritize simplicity:** Focus on core functionalities that improve communication and organization within a study group.
- **Use low-code platforms:** Explore platforms like Figma, Wix or Thunkable that allow building apps without extensive coding experience.
- **Focus on user experience:** Design a visually appealing and intuitive interface that is easy to navigate for all users.

Bonus Points:

- Integrate features for scheduling study sessions or finding group study spaces on campus.
- Allow users to connect with classmates based on their course selection for study group formation.
- Design a system for peer feedback and group evaluation to enhance learning.

This prompt allows beginners to showcase their creativity and problem-solving skills while developing a user-friendly platform that caters to a real need within the college community.
